

INSTRUCTIONS FOR ATTACHING ROCKER FEET

Both rocker feet are the same, so either can be attached to the right or left side.

Place the chair upside down on the floor on a soft surface, such as a rug or carpet. Holding the rocker foot locate the hole with the longest distance from the end of the rocker foot. This hole can be easily placed over the end of a rear chair leg as seen in picture A.

Place the other hole over the front chair leg as shown in picture B. It will require moderate tapping with the palm of your hand or other object, which will not bend or damage the metal rocker foot – shown in picture C. With this action the front hole in the rocker foot should fit over the front chair leg.

Attach one of the four screws, included, into the small hole of the rocker feet, and with a Phillips Head screwdriver, securely attach the rocker feet to the chair. Your rocker is now ready for you to enjoy.
